

The Royal Institute of Technology (KTH), Division of Transportation and Logistics, in Stockholm Sweden, is seeking applicants for a tenure-track position at the level of assistant professor, effective Fall 2010. The subject area is in Intelligent Transportation Systems, and application of information and communication technologies towards more efficient and sustainable transportation systems operations. Applicants must have an earned PhD degree in an appropriate field and background and research interests in a related area including transportation systems, computer science, simulation. Responsibilities include the development of a vigorous interdisciplinary research program and contributing to the educational activities of the school. .

The new professor will benefit from recent initiatives such as the establishment of an ITS lab with real time feeds of GPS-based traffic data and strategic research funding in the transport area. The position comes with a generous start-up package.
